Metro Access Chambers

Modular access chamber system constructed using injection moulded PP panels. Panels are designed to interlock at the corners with an integrated mortice and tenon taper lock system, forming a modular ducting access chamber that can be stacked for additional depth. The external wall is patterned such that a concrete surround will flow into voids, adding to the structural strength of the system.

Material	Panels are injection moulded in 100% recycled Polypropylene
Colour	Black.
Marking	Covers are black in colour and marked "Naylor Drainage" with the legend "Traffic Signals" or "Street Lighting" where applicable
Quality System & Inspection	All quality systems and inspection procedures comply with BS EN ISO 9001: 2015 (Certificate No: FM 01420)
Standards & Certification	The cover and frame will meet the loading requirements of BS EN124 Class B125. System is approved for use by many Local Authorities and Utility Sectors
Packaging	Chambers can be supplied flat packed or pre-assembled in the following sizes (mm): 300×300, 300×450, 450×450, 450×600, 600×600 (larger fabricated sizes available on request)
Storage	For long term storage keep away from direct sunlight to avoid product degradation, over 12 months exposure to direct sunlight should be avoided
